

Questions:

What is the relationship between neighbor group and Availability of Room?

What is the value count based in neighbor group?

Who are the busiest hosts?

From this project my findings could help Airbnb hosts to have a good understanding of the users behavior and where are the most valued areas

Data Description:

This dataset contains all the Airbnb listings from the year 2019. It contains the following features:

- Host name
- Host id
- Neighborhood group
- Latitude
- Longitude
- Room type
- Price
- Etc.

Tools:

For this project am going to follow the given guidelines in Github. Also, I will be using some tools for my approach including pandas, numpy, matplotlib, stats and math.
